Technical Notes Page 3

Table ERC.3 Energy Consumption by Economic Sector

Source: International Energy Agency (IEA), Energy Balances of Organisation for Economic Cooperation and Development (OECD) Countries, 1960–1997, on diskette (OECD, Paris, 1999) and Energy Balances of Non-OECD Countries, 1971–1997, on diskette (OECD, Paris, 1999).

Data for OECD and Economic Commission for Europe countries were compiled from information provided in questionnaires filled out by each country. Data from other large- and medium-sized energy consumers come mostly from individual country information. Data for the remaining countries were gathered from a variety of international organizations.

The World Resources Institute calculated the amount of total final energy consumption (TFC) used by each sector as a percentage of TFC for each country. TFC does not include distribution losses and fuels that are transformed to another form (e.g., fuels used for electricity generation, crude oil transformed into oil products in refineries, etc.).

Industry sector includes energy consumption by the iron and steel industry, chemical industry, nonferrous metals basic industries, nonmetallic mineral products (glass, ceramic, cement, etc.), transport equipment, machinery, mining and quarrying, food and tobacco, paper, pulp and print, wood and wood products, construction, textile and leather, and any nonspecified industry. Iron and steel consumption is the energy consumed by the iron and steel industry as a percentage of the total energy consumed by the country.

Transportation sector includes all fuel for air, road, and water transport except fuel used for international marine bunkers and for ocean, coastal, and inland fishing. Air transportation includes both international and domestic civil aviation. Road transportation includes all human and cargo transport along national road networks.

Agriculture sector refers to all agricultural and forestry activity, including ocean, coastal, and inland fishing.

Commercial and public services refer to service sectors such as stores, repair shops, and restaurants. Residential sector includes household energy use.

IEA reports that it can be difficult to distinguish accurately between the agriculture, commercial, and public services sectors and that a figure for "total energy use" is more accurate than totals for the individual sectors.
